

Recipe for Home-made Weed Extract Liquid Fertilizer

Fermented Plant Juice Recipe

Pick plant material (weeds, nettles, crop residue) when it is green & wet with dew; don't wash

Mix plant material with organic brown sugar; approximately 1:1 by weight

Fill crock or glass jar with the plant and the sugar, cover top surface with sugar

Weigh contents down and cover with a cloth

Store it out of sunlight at room temperature for a week

Strain out the liquid for use as a foliar or drench.

Dilute at 1:500. This is equivalent to

1 cup extract to 31 gallons water

¼ cup extract to 7.8 gallons water

1 Tbs extract to 2 gallons water

Apply when: once a week or more often throughout growing season

Store at room temperature. Label everything & date it!
